RESTRICTION

Restriction requirement

1. Restriction to one of the following inventions is required under 35 U.S.C. 121: Claims 1-11 constitute a single inventive concept, Group I, with respect to the methods *per se* for detecting cancer. However, Group I comprises 38 different target sequences designated SEQ ID NOS:1-32 and 173-178 each of which defines a distinct invention method.

Unrelated inventions

2. Different nucleotide sequences are structurally and functionally distinct chemical compounds that are unrelated to one another. These sequences are thus deemed to constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.. By statute, "[i]f two or more independent and distinct inventions are claimed in one application, the Commissioner may require the application to be restricted to one of the inventions." 35 U.S.C. 121. Pursuant to this statute, the rules provide that "[i]f two or more independent and distinct inventions are claimed in a single application, the examiner in his action shall require the applicant . . . to elect that invention to which his claims shall be restricted." 37 CFR 1.142(a). See also 37 CFR 1.141(a).

Election requirement

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant is required under 35 U.S.C. 121 to elect a single target mutant nucleotide sequence identified by its SEQ ID NO: for prosecution on the merits to which the claims of Group I (all present claims) shall be restricted. A single oligonucleotide identified by its SEQ ID NO:, i.e., one of SEQ ID NOS:33-172, that hybridizes to the elected target mutant nucleotide sequence also may be elected.
